BULLETIN No: 2

*** TROPICAL STORM WARNING IN EFFECT FOR JAMAICA ***

A **TROPICAL STORM WARNING** is in effect for Jamaica as the Area of Low Pressure over the west-central Caribbean Sea continues to become better organized, and has the potential to develop into a tropical cyclone by Monday morning. This means that tropical storm conditions pose a possible threat to Jamaica within 36 hours.

At 7:00 p.m. **Potential Tropical Cyclone Number 18** was centred near latitude 13.0 degrees North, longitude 76.9 degrees West. This is about 555 kilometres (345 miles) south of Kingston, Jamaica or 600 kilometres (373 miles) southeast of Negril Point, Jamaica.

The Disturbance is currently drifting slowly, but is expected to soon begin moving toward the north near 11 km/h (7 mph). A turn to the northwest is expected to occur tomorrow and continue for the next few days. Maximum sustained winds are near 55 km/h (35 mph) with higher gusts. Although the deep convection is not quite organized enough to designate the system a tropical depression at this time, the system is expected to become a tropical depression late tonight or tomorrow and steady strengthening is forecast beyond that time.

On the forecast track, the centre of the system is expected to continue moving towards Jamaica tonight and, **be near Jamaica by late Monday evening**, and near or over the Cayman Islands Tuesday and Wednesday. While the system is in the vicinity of Jamaica, it is expected to produce **locally heavy rainfall and strong, gusty winds**, primarily over eastern and southern parishes tomorrow and Tuesday. Landslides should also be anticipated in vulnerable sections of the island.

Over the marine areas, the forecast is for widespread showers and thunderstorms, which may be heavy at times, **with strong gusty winds up to tropical storm force** to affect all marine zones on Monday, especially inshore and offshore the south coast.

All small craft operators including fishers from the cays and banks should be arriving in port to start preparations for safe harbour.

The Meteorological Service continues to monitor the progress of this system, and all interests are encouraged to pay special attention to further Releases.

The next Bulletin on this system will be issued at 11:00 p.m.
